

Steps to run ESP32

1 - We create a definition for it

File, then preferences, then copy the library link, then put it in the

2- preferences

3-We click Tools, then Board, then Board Manager, then type ESP32, then install,

then close

- A file, then an example, then BASIC, then Blink, and then we try to

4 program it

5 -Select the board, go to Tools, then Board, then WEMOS

6 - To make a definition for the port, connect the board to the computer via a cable. Once the board is connected, go to Tools, then Port, then COM8. Once the code file is downloaded, the LED will start blinking.
